

STAR of HARMONY

The model of the star of harmony creates a balancing, harmonious and relaxed atmosphere in the room and within us

Harmony from Holy Geometry

GEOTRANSMITTERS are not only receivers and senders, but also connectors, because they are based on sacred geometry and therefore the foundation of creation.

Energetically balancing and harmonizing structures make those functions stronger. The STAR OF HARMONY consists of star-tetrahedron (2 tetrahedrons entwined create a MERKABA) and one octahedron (2 square-pyramids that are connected at their base).

This GEO-TRANSMITTER connects the polarity of the material world, represented by the octahedron, with the polarity of the spiritual world, represented by the tetrahedron. The tetrahedron, expressing the spiritual world embraces the octahedron, expressing the material world.

The STAR OF HARMONY encompasses these two geometrical structures, which creates an energetic field for the union and harmonization of bodily and spiritual aspects. The STAR OF HARMONY creates a spherical energetic field, which has an effect that encompasses a circuit of approx. 16 meters. Therefore, this star is suitable anywhere, where a harmonious and relaxed atmosphere is being desired.

Measurements

- Height tip to tip 21 cm, side length 17 cm
- Diameter of the sticks 3 mm
- (3 and 21 are also numbers of the Fibonacci sequence and are based on the spiral of the golden cut).

Prices

- | | | |
|----------------------------|------------|-----------|
| - STAR OF HARMONY brazen | Euro 189.- | CHF 209.- |
| - STAR OF HARMONY silvered | Euro 380.- | CHF 421.- |
| - STAR OF HARMONY gilded | Euro 416.- | CHF 461.- |

Payment

Invoice with payment slip or bank transfer.

Delivery

Postal package plus postage or shipping charges, as well as possible customs.

Warranty

2 years on fabrication deficiencies without external influence.

Remark

Changes in the technical data and prices are reserved. All information given in this pamphlet are not verifiable by the current state of scientific knowledge. We indicate this for legal reasons.

Research, production, and distribution of Geotransmitters for transferring vibration and energy.
The name Geotransmitter is based on sacred geometry and comes from the latin word 'transmittere' for receiving, transferring, and sending, as well as the English word for sender, converter, and transformer.

All of our Geo-Transmitters are based on sacred geometry, the 5 platonic bodies and numbers of the Fibonacci sequence. They were produced in specific measurements and selected materials, and create subtle and energetic resonance fields, which are then utilizable for humans.

Sacred Geometry

Following vibration and frequency, space and dimension, light and color, tone and sound (finde diese differenzierung im englishen nicht), it needs a 5th counterpart to complete the material creation. Because for the manifestation of all there is, it needs sacred geometry, which carries the numbers of mathematics in it. Sacred geometry is also called the secret, hidden or hermetic geometry, as it shows what lies behind the physical existence of the universe.

The 5 Platonic Bodies*

Ultimately, there are only 5 geometric bodies within any physical existence, which underlie everything: the cube, tetrahedron, octahedron, dodecahedron, and icosahedron. The platonic bodies together constitute all basic forms, on which the structure of sacred geometry and creation are built on. Because all forms in our material world and creation are composed of one of these forms or their compounds. They are the basis of all manifestations, the atoms and crystals, the elements as well as cell structures of every living organism. Thus platonic bodies form the foundation of creation, on which everything was manifested, and allow through the connection of all the foundations of creation the manifestation of everything that we perceive around us.

Platonic bodies exhibit the following fundamental features:

- Equal edge length
- Which are confined by equally sized areas
- Equal inner angles between the areas
- In a sphere, all corner-points touch the inside of the surface

Comment:

*They are called "platonic bodies" because the Greek philosopher Plato was the one who showed their true cohesion and interpretation. He describes the universal cosmology in his opus Timaios, which he based on connected geometrical structures. However, the knowledge that these 5 geometrical bodies are the foundation of the universe, was known long before Plato. In the Ashmolean museum in Oxford, one can find models of platonic bodies that are dated 3400 years old, which means 1000 years before Plato. And there are precise-made models of crystals in the museum in Cairo, which are dated 3000 years old.

Area of Application of the STAR OF HARMONY

Aid in Meditation

The STAR OF HARMONY is perfectly suited for meditation, or for mediumistic work, or for therapeutic purposes. It establishes a well balanced human energy field. Energetic deficits or surpluses are smoothed, so that the human energy field returns to an equilibrium state. This energetic balancing, which works for the physical, as well as the spiritual layer, also connects these two layers. This forms the basis that can lead to experiencing deep levels of relaxation. After only a few sessions, an inner state is reached, which can be kept without need to stay seated under the STAR OF HARMONY. The connection to the inner self is deepened, strengthened and also harmonized.

As a therapeutic instrument

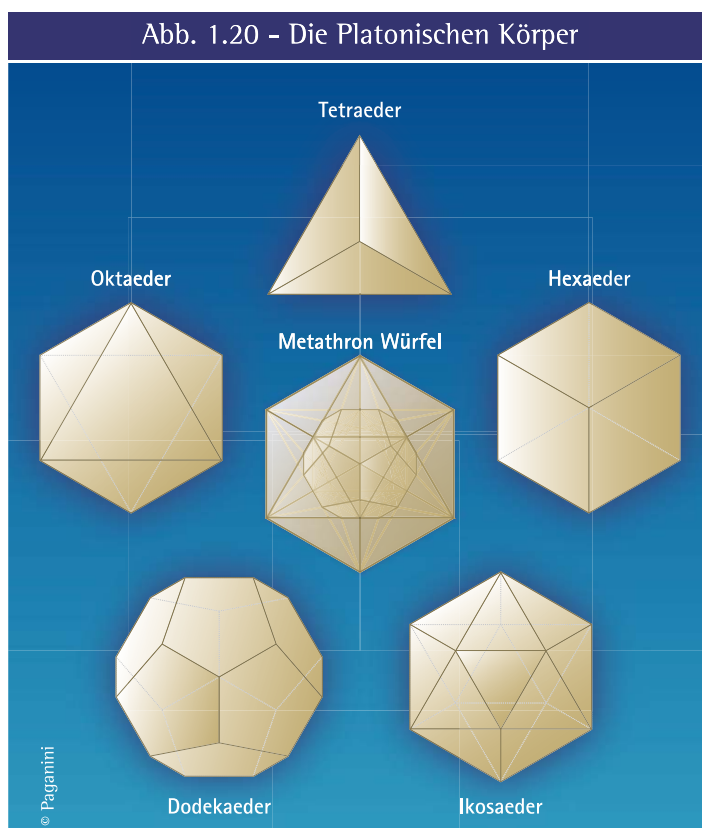

The STAR OF HARMONY is an excellent aid for holistically oriented therapists. Place your patient for 15 minutes under the STAR prior to your session, and she/he will be more relaxed and open for the therapy.

Decoding / Energizing of Food

The STAR OF HARMONY can also be used to neutralize or charge food. Many food items, such as coffee, chicken, or eggs from battery farming, pasta, meat from butcher animal husbandry, fruits, vegetables, dairy products etc. contain radiesthetic left turning vibrancy (energies). The STAR OF HARMONY neutralized those and charges the food items to be right-turning. To achieve this, food items are merely placed for a couple of minutes in a distance of around 10 cm to the STAR.

Room energy

Hung in a room, the STAR OF HARMONY creates a balancing and harmonizing vibrancy in homes, work spaces, waiting- or practice rooms.

Animals

The positive effect of the STAR OF HARMONY is also noticeable on animals. Cats and dogs often look for a place close to this geometrical structure.

Plants

When hung close to plants, faster and healthier growth can be noticed.
